Bron, O. B., Obraztsov, V. A., and Bron, Ye. M.  
A SERIES OF AUTOMATIC DEVICES FOR MAGNETIC FIELD SUPPRESSION. [1960] 14p. 9 refs.  
C. E. Trans. 1584. MC66  
Order from U.S. Govt. Amt \$2.40. pp \$1.30 61-13420

Transl. of Elektr. i neelektr. apparat. (UDSSR) 1959, v. 30, no. 9, p. 49-58.

Automatic field suppressors of the new series have massive coils with alternating surfaces and relatively mechanical and arc-suppressing systems. They are not polarized, and they can be used for short operation without a preliminary warming. The suppressors of the new series of large machines are connected in parallel with the excitation circuit. This increases the reliability of field suppression and shortens the time of passage to ground. A second device for field suppression is in the excitation circuit of the generator. The duration of field suppression is determined mainly by the damping time of eddy currents. (Editor (Engineering Electrical), Tl. v. 3, no. 2) (over)
